

I have a success story for you with relation to our 12 year old Blue Merle Australian Sheppard. Before we started feeding the raw diet to Beau Dodge he had a flea allergy (one flea would drive him nuts), symptoms of arthritis, no energy and was underweight and could not add weight to him. The other thing his coat was dull and was thin in spots.

Well after putting him on the Raw Diet his flea allergy seems to be gone, arthritis seems to be gone, he has all this energy wanting to play with the other dogs now. His weight is back to normal and his coat is shinny and thick. So I am a believer in the raw diet. Turned Beau Dodge into a different dog and he his happier.
